PROFESSIONAL SUMMARY

Software Engineer focused on building and deploying scalable mobile applications for iOS and Android using Flutter and Dart. Strong background in Clean Architecture, BLoC state management, and seamlessly integrating AI systems and RESTful APIs into mobile interfaces. Proven ability to write maintainable code, troubleshoot complex cross-platform issues, and ship production-ready applications within Agile teams.

SKILLS

Programming Languages: Dart, Python, Java, JavaScript, SQL

Software Development: Object-Oriented Programming (OOP), Data Structures & Algorithms, Design Patterns, Unit Testing, Debugging

Mobile Development: Flutter, Dart, BLoC, Provider, Clean Architecture, iOS & Android App Development, AI/ML Integration

Databases & APIs: SQL, PostgreSQL, Firebase (Firestore, Auth, FCM), Supabase, RESTful APIs, JSON

Tools & Workflow: Git, GitHub, Android Studio, VS Code, Postman, Figma, Agile, Scrum

Soft Skills: Problem Solving, Cross-functional Collaboration, Technical Troubleshooting

PROJECTS

Groomio: Salon Booking Platform with AI Hairstyle Suggestions

Production Release

Flutter, BLoC, Clean Architecture, AI/ML, REST APIs

- Shipped V1 to production, building the entire mobile interface for an AI-powered booking platform serving 30+ active beta users.
- Integrated a face-shape based AI/ML hairstyle suggestion feature, allowing the mobile client to process and display dynamic recommendations.
- Connected external RESTful APIs and applied Clean Architecture principles to keep the codebase independent and easy to maintain.
- Used a hash-map for slot lookups, achieving O(1) availability queries to drastically reduce search time and improve app speed.

Chatzilla: Real-Time Messaging App

Live on Google Play Store

Flutter, BLoC, Firebase, FCM

- Published a real-time messaging app to the Google Play Store, handling the entire release process from builds to signing and deployment.
- Validated performance and UI responsiveness across multiple physical Android device configurations prior to live release.
- Debugged message streams and optimized the state tree, reducing unnecessary widget rebuilds by approximately 40%.
- Set up a Firebase NoSQL database and integrated cloud messaging for instant, real-time data synchronization.
- GitHub: github.com/mun33b-exe/chatzilla

UniWeek: Event & Schedule Management Mobile App

Visio Spark 2025 Competitor

Flutter, Provider, Supabase, FCM, Clean Architecture

- Built a collaborative event scheduler using Provider for state management and Supabase for a reliable backend.
- Hooked up real-time database syncing and Firebase Cloud Messaging to send instant push notifications to users.
- GitHub: github.com/mun33b-exe/UniWeek

EXPERIENCE

Flutter Developer Intern

May 2025 – July 2025

DevelopersHub Corporation, Islamabad

- Developed and maintained cross-platform Flutter applications for iOS and Android, focusing on seamless user experiences.
- Wrote clean, well-documented code using BLoC state management to separate business logic and keep the app scalable.
- Troubleshot and optimized UI performance and cross-platform bugs directly on physical test devices.
- Collaborated with senior developers through Agile sprints, submitting 15+ pull requests for bug fixes and new features.

EDUCATION

BS Software Engineering, COMSATS University Islamabad

Graduated: June 2026

CGPA: **3.35 / 4.00**
